Profile

Senior Java Full Stack Developer with 11 years of experience in the design, development and evolution of web applications and distributed systems. **Expertise in Java, Spring Boot, microservices architectures and REST APIs, complemented by Full Stack experience with React. Strong command of REST APIs, software quality and continuous integration and continuous deployment (CI/CD) practices**. Proven experience in legacy application modernization, performance optimization, software quality, security and deployment industrialization. Used to mentoring developers, contributing to architecture decisions and helping resolve complex technical issues in production.

Professional Experience

➢ VIAMEDIS — Tech Lead | May 2023 – Present

Viamedis is a subsidiary of the Malakoff Humanis group that manages third-party payment (tiers payant) operations. It is considered a major player in France, with nearly 22 million beneficiaries and 240,000 partner healthcare professionals and facilities.

Responsibilities:

Software architecture and backend development

- Design, develop and evolve backend services in Java and Spring Boot, applying best practices in design, modularity and separation of concerns.
- Contribute to the definition, design and evolution of microservices-based distributed architectures, ensuring consistent interactions, interoperability and decoupling of application components.
- Design, develop and maintain REST APIs and define exchange mechanisms between services, while ensuring their integration with frontend applications and existing systems.
- Analyze and optimize REST API performance by working on response times, SQL queries, data stream processing and data access mechanisms.
- Optimize application performance by working on response times, SQL queries and data access mechanisms.
- Implement asynchronous communication mechanisms with Apache Kafka.
- Secure applications and APIs with Spring Security and OAuth2.

Modernization and code quality

- Analyze existing *legacy* applications to identify obsolete components, complex dependencies, design flaws and areas at high risk of regression.
- Assess, qualify and prioritize technical debt based on its impact on application maintainability, stability and ability to evolve.
- Carry out targeted refactorings to improve code readability, modularity and maintainability.
- Secure functional and technical changes by implementing and strengthening automated tests, in order to prevent regressions and ensure the reliability of changes.
- Design and maintain unit tests with JUnit and Mockito to validate the behavior of backend components and limit regressions.
- Use static code analysis, notably with SonarQube, to identify quality defects, complexity hotspots and technical risks.

Full Stack development

- Develop and maintain frontend features with React and ensure their integration with REST APIs.
- Design reusable UI components and ensure consistent exchanges between frontend and backend.
- Analyze and fix functional and technical issues across the entire application stack.

Production, DevOps and technical mentoring

- Diagnose production incidents, analyze root causes and contribute to implementing appropriate fixes.
- Use monitoring tools and logs to analyze malfunctions and performance issues.
- Contribute to the evolution of CI/CD pipelines with GitLab CI.
- Take part in containerizing applications with Docker and deploying them on Kubernetes.
- Support developers in solving technical issues and sharing best practices.

AI-assisted development

- Leverage AI-based development assistants, notably Claude, to speed up prototyping, code generation, test writing and technical documentation.
- Analyze, correct and validate AI-generated code through compilation, automated tests and code reviews.
- Maintain technical ownership of the solutions produced by checking their architectural consistency, security and maintainability, in compliance with internal confidentiality rules.

Technical environment:

- **Languages:** Java 17, Java 25, JavaScript, TypeScript, SQL.
- **Frameworks and technologies:** Spring Boot, Spring Batch, React, Node.js.
- **Architecture and integration:** Microservices, REST API, SOAP, Kafka, RabbitMQ.
- **Databases:** MySQL, PostgreSQL, SQL Server.
- **Cloud, security and API Management:** Azure B2C, Azure API Management (APIM).
- **DevOps and CI/CD:** Git, GitLab CI/CD, Docker, Kubernetes, Argo CD.
- **Code quality and security:** SonarQube, Dependency-Track.
- **Monitoring and observability:** Dynatrace.
- **Development tools:** IntelliJ IDEA, Visual Studio Code, NPM.
- **Project management and collaboration:** Jira, Confluence, Scrum.

➢ PRIMATEC Engineering — Full Stack Developer | January 2021 – April 2023

PRIMATEC-Engineering is a subsidiary of the Technica-Engineering group specializing in electronic engineering and embedded software development, mainly for the automotive industry.

Responsibilities:

- Design, develop and evolve high-performance, secure web applications built on a microservices-based distributed architecture.
- Develop dynamic, responsive and user-friendly interfaces using Angular, React, JavaScript/TypeScript, HTML5 and CSS3.
- Implement business logic, application services and server-side data validation mechanisms.
- Identify and reduce technical debt to improve application maintainability and reliability.
- Diagnose production incidents, analyze their causes and contribute to service recovery.
- Strengthen application security and apply development best practices.
- Write unit and integration tests and take part in code reviews.
- Support developers, share best practices and contribute to the technical coordination of the team.
- Contribute to the industrialization of build, test and delivery processes with GitLab CI and Jenkins.

Technical environment:

- **Languages:** Java 8, Java 11, Python, JavaScript, TypeScript, SQL.
- **Frameworks and libraries:** Spring Boot, Spring Security, Express.js, React, Angular.
- **Architecture and integration:** Microservices, REST API, SOAP, Kafka.
- **Databases:** MySQL, PostgreSQL, SQL Server, MongoDB.
- **Cloud and infrastructure:** AWS, Docker.
- **Continuous integration and automation:** Git, GitLab CI/CD, Jenkins, npm.
- **Software quality:** SonarQube.
- **Project management and collaboration:** Scrum, Jira, Confluence.
- **Development tools:** IntelliJ IDEA, Visual Studio Code.

➢ MYWEB IT — Full Stack Developer | February 2015 – December 2020

MYWEB IT is a company specializing in IT solutions and the digital transformation of businesses. It notably offers SIX ERP, an enterprise resource planning (ERP) software designed for SMEs.

Responsibilities:

- Design, develop and deploy an ERP for schools, covering administrative and academic management as well as the tracking of school activities.
- Develop inventory and logistics management modules, integrating business rules and operational processes.
- Design and develop a vehicle rental management application, covering the main business processes related to fleet and rental management.
- Develop an e-commerce platform dedicated to selling cosmetic products, integrating catalog and order management features.
- Develop the backend services and APIs required for data management and exchanges between the different application layers.
- Design and develop user-friendly interfaces with Angular, JavaScript, HTML and CSS.
- Model and optimize databases as well as SQL queries.

Technical environment:

- **Languages:** Java 8, JavaScript, SQL.
- **Frameworks:** Spring Boot, Spring Security, Angular.
- **Databases:** MySQL, PostgreSQL, SQL Server.
- **Tools:** IntelliJ IDEA, Visual Studio Code, Git.
- **Methodology:** Scrum.

Technical Skills

Java / Spring Boot	REST API, design patterns, collections/streams, concurrency, JVM, Spring MVC/Data/Security, validation, logging and metrics.
Spring Batch	Jobs, Steps, readers/processors/writers, chunks, transactions, restarts, idempotency, scheduling and SQL Server optimization.
React	JavaScript, TypeScript, JSX, Hooks, routing, state management, forms, REST API, security, accessibility, performance and testing.
Docker	Multi-stage Dockerfiles, secure images, volumes/networks, Pods, Deployments, Services.
GitLab CI	Branches, merge requests, reusable pipelines, runners, artifacts, protected variables, tests, quality/security checks and deployments.
Azure	App Service, Container Registry, Managed Identities, Key Vault, Azure Monitor, Log Analytics.
SQL Server	Modeling, indexes, queries, stored procedures, execution plans, transactions, locking.
Dynatrace	Metrics and log analysis, anomaly detection, response time and error analysis, performance troubleshooting, dashboards, alerting and environment monitoring.
Dependency-Track	Software composition analysis, open source dependency tracking, CVE vulnerability detection, third-party component risk assessment, CVSS score tracking.
Plumber – Security	GitLab CI pipeline auditing and hardening, detection of misconfigurations and exposed secrets.
Claude / AI	Code exploration, refactoring, test/documentation generation, structured instructions, validation with protection of sensitive data.

Education & Certification

Education:

2012–2014 | Master's degree: Computer Networks and Telecommunications — ENET'Com, Sfax.

2009–2012 | Bachelor's degree: Computer Science — Faculty of Sciences of Sfax.

2008–2009 | Baccalaureate: Computer Science — Sfax, Tunisia.

Certifications:

December 2022: International Software Testing Qualifications Board® Identifier: 95381

June 2021: Scrum Fundamentals Certified® Identifier: 854174.

Languages:

French: Advanced (B2)
English: Advanced (B2)
